

## Identifiers

Identifiers are names used for user-defined variables and functions:

- They must begin with an uppercase ( `A-Z` ) or lowercase ( `a-z` ) letter, or an underscore ( `_` ).
- The next characters can be letters, underscores or digits ( `0-9` ).
- They are case-sensitive.

Here are some examples:

```
myVar
_myVar
my123Var
functionName
MAX_LEN
max_len
maxLen
3barsDown // NOT VALID!
```

The [Pine Script™ Style Guide](#) recommends using uppercase SNAKE\_CASE for constants, and camelCase for other identifiers:

```
GREEN_COLOR = #4CAF50
MAX_LOOKBACK = 100
int fastLength = 7
// Returns 1 if the argument is `true`, 0 if it is `false` or `na`.
zeroOne(boolValue) => boolValue ? 1 : 0
```
