  - Spacing
  - Line wrapping
  - Vertical alignment
  - Explicit typing
- Debugging
  - Introduction
  - The lay of the land
  - Displaying numeric values
    - When the script's scale is unimportant
    - When the script's scale must be preserved
  - Displaying strings
    - Labels on each bar
    - Labels on last bar
  - Debugging conditions
    - Single conditions
    - Compound conditions
  - Debugging from inside functions
  - Debugging from inside `for` loops
    - Extracting a single value
    - Using lines and labels
    - Extracting multiple values
  - Tips
- Publishing scripts
  - Script visibility and access
    - When you publish a script
    - Visibility
    - Access
  - Preparing a publication
  - Publishing a script
  - Updating a publication
- Limitations
  - Introduction

- Time
  - Script compilation
  - Script execution
  - Loop execution
- Chart visuals
  - Plot limits
  - Line, box, and label limits
  - Table limits
- o `request.\*()` calls
  - Number of calls
  - Intrabars
  - Tuple element limit
- Script size and memory
  - Compiled tokens
  - Local blocks
  - Variables
  - Arrays and matrices
- Other limitations
  - Maximum bars back
  - Maximum bars forward
  - Chart bars
  - Trade orders in backtesting
